Important Notice 6

1 OVERVIEW

In FOC v4.4.1, both IAR v7.x and v9.x are supported with the individual folder as below:

The folder of “iar_proj” intends to be used for IAR v7.x, which can be converted to IAR v8.x as explained in the “IAR_v7_to v8_configuration”.

The folder of “iar_proj_v9” is only used for IAR v9.x. This document will discuss how to configure the IAR v9.x to build Qorvo FOC v4.4.1.

2 CONFIGURATION

This section will discuss how to build the FOC projects with IAR v9.x.

2.1 Suppress TA022 and TA023

TA022 and TA023 have been treated as Errors in IAR v9.x. Please follow the below instructions to build FOC v4.4.1.

2.2 Configure Floating Point Setting

For PAC55xx, please select FPU as "VFPv4 single precision" as below.

For PAC52xx, FPU is configured as NONE because it is ARM-M0 Core (Not support floating point operation).
